

Allotment of frequency bands of 3600-3800 MHz

The frequency band of 3600-3800 MHz is divided into 28 two-way radio channels with channel spacing of 3.5MHz and duplex spacing of 100 MHz according to CEPT/ERC/REC T/R 12-08 Recommendation, Annex B. Radio channels with ordinal numbers 1-6, 8-13, 15-20 and 22-27 are grouped into four 2x21MHz frequency blocks, allocated for the implementation of fixed wireless access on national level. In the procedure of a public international tender No.02/2007 one frequency block was assigned for the implementation of fixed wireless access on national level, as illustrated by Table 2:

Ordinal number of the channel	Block	Block width [MHz]	Lower band [MHz]	Upper band [MHz]
1-6	A	2x21	3601.0-3622.0	3701.0-3722.0
7	Guard channel	2x3.5	3622.0-3625.5	3722.0-3725.5
8-13	B	2x21	3625.5-3646.5	3725.5-3646.5
14	Guard channel	2x3.5	3646.5-3650.0	3746.5-3750.0
15-20	C	2x21	3650.0-3671.0	3750.0-3771.0
21	Guard channel	2x3.5	3671.0-3674.5	3771.0-3774.5
22-27	D	2x21	3674.5-3695.5	3774.5-3795.5
